DETAILED ACTION

Claim Rejections - 35 USC § 103

Claims 47-50 have been rejoined for examination pursuant to traversal arguments filed in the provisional election paper of January 21, 2005.

Claims 13-21, 31-36, 39-42 and 46-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilk (US5871446) and Holmberg (US6135960). The former is directed to a flexible carrier having plural transducers thereon for forming 3D images of body organs by electronic scanning with or without couplant. The latter evidences that a rigid segmented variant for three-dimensional imaging was also known and in association with switched and delayed steering and therefore it would have been obvious to use both with varying degrees of flexible or coupled conformance and segment position control to obtain the three-dimensional images.

This action is not made final however the case should be prepared for final action.
